

# ULTRAPURE - TREATED FRESH AIR PURIFIER

## Features

High filtration  
efficiency

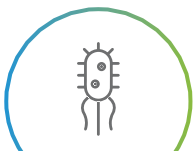

Low power  
consumption

The Fresh Air Purifier comes with a **Patented Filtration Technology** which purifies air in multiple stages. Incoming air is first ionized using the **plasmOX filter** and then filtered through our multi-layer CBR filter media. Eventually AOP destroys all pathogenic microbes like viruses and bacteria. The technology increases filtration efficiency preventing airborne contaminants like Particles, Microbes, VOC's & Odors from entering the building.

## Protection From

Viruses

Bacteria

PM2.5 & PM10

VOC's

Gases & Odor

Formaldehyde
